

Jessica Battles: 5 Ethics to uphold as software developers.

1. Prioritize the security of the software to protect users from harm and data breaches.
2. Respect user privacy by minimizing data collection and obtaining explicit consent from the user when information is needed; use clear and plain language when seeking consent.
3. Be transparent and honest about my software's intentions, capabilities, and limitations and accountable in all user communication.
4. Consider how my software will impact the social environment and will not create software that can be used with malicious intent.
5. Prioritize accessibility and inclusivity by ensuring the software can be used by individuals with disabilities.
